

Hey kids! Take the Revolution Books Science Quiz.

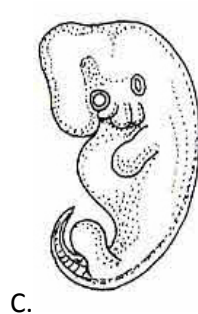

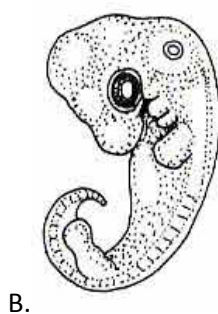

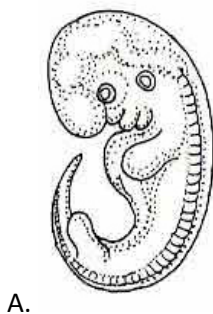

Question 1. Over millions of years, evolution has produced many new life forms. Which of these three animals did NOT live at the same time as the other two?

Question 2. "Greenhouse gases" in the atmosphere keep heat from radiating away from the earth and cause the earth to become warmer. Which of the following does NOT produce greenhouse gases?

Question 3. All animals develop from a fertilized egg into tiny embryos. The embryos look very much alike, because all animals are related and start off much the same. Match the magnified views of the embryos with the animals that they will develop into (this is a trick question!):

The choices are:

A human

A rabbit

A chicken
